SUMMARY

Third-year Computer Science student with hands-on experience in Python, SQL, and REST APIs, and a co-op at HSS Business Solutions supporting software delivery through QA/UAT testing, data migration, and API-driven application development. Comfortable troubleshooting issues, validating data across systems, and writing clear documentation. Detail-oriented, quick to learn new platforms, and returning to full-time studies after the work term.

EDUCATION

York University, Toronto, ON 2023 – Dec 2027
B.A. (Honours) Computer Science
Relevant coursework: Software Design, Database Systems, Algorithms and Complexity, Operating System Fundamentals, Computer Network Protocols, Fundamentals of Data Structures, Theory of Computation, Advanced Object-Oriented Programming, Software Tools

SKILLS

Programming: TypeScript, JavaScript, Java, Python, C, C#, SQL, SOQL, HTML, CSS
Frameworks & Libraries: Node.js, Express, Next.js, React, Vue.js, Spring Boot, Vite, .NET, Prisma, JPA/Hibernate
Databases: PostgreSQL, SQL Server, Azure SQL
Tools: Git, GitHub, GitHub Actions (CI/CD), Vercel, Docker, Swagger, Postman, JUnit, Azure Data Studio, VS Code, Eclipse
Concepts: REST APIs, API integration, data migration, data modeling, QA/UAT testing, troubleshooting and debugging, technical documentation, code review, CI/CD, Agile, data structures and algorithms

EXPERIENCE

HSS Business Solutions, Mississauga, ON (Co-op) Jan 2026 – Present
IT Project Coordinator – Application Developer *May 2026 – Present*

- Develop a Vue.js application generated within JD Edwards (JDE) and built around API integrations that support business workflows, from requirements through testing
- Write SQL and SOQL queries to retrieve, validate, and connect data between source systems and the application
- Consume APIs, handle responses and errors, and confirm data flows correctly into the user interface
- Built a C#/.NET utility to automate report migration and configuration updates, reducing repetitive manual work and improving consistency
- Support data migration efforts and ongoing development projects, working with server-side systems and enterprise reporting systems

IT Project Coordinator – QA Analyst *Jan 2026 – Apr 2026*

- Supported software delivery through coordinated QA and UAT testing activities
- Performed manual and automated testing to validate application functionality and identify defects
- Verified data accuracy and system behavior across server-side systems, SQL data sources, and enterprise reporting
- Collaborated with developers and stakeholders to track issues, validate fixes, and support release readiness

YU Blueprint, York University Software Developer, 2026 – Present

- Contribute to Fix the 6ix, a full-stack web dashboard (Next.js, React, TypeScript, PostgreSQL, Prisma) that digitizes the ReGiftcard Program for West Neighbourhood House, replacing manual spreadsheet tracking across 50+ store brands with a tool non-technical volunteers can use
- Platform supports gift card entry with duplicate detection, spending and transaction tracking, donation logs, CSV bulk import, and role-based admin management for volunteers
- Recently started on the JavaScript/TypeScript side of the codebase, working through pull requests, code review, and GitHub Actions CI/CD with Vercel preview deployments

EASE-EAGL Lab, York University Jan 2026 – Present
Undergraduate Research Assistant, Model-Driven Epidemiology (SEIR Framework)

- Studied a model-driven epidemiological framework based on SEIR models using Eclipse EMF and Sirius, and analyzed a domain-specific modeling language supporting parametric modeling and population stratification
- Built a Python pipeline that parses 30 epidemiological models (XML) across 10 diseases, normalizes them, and mines recurring structural sub-patterns into a reusable library of 211 patterns
- Explored LLM-based approaches for epidemiological model generation, interpretation, and validation
- Examined Java-based equation generation and Python-based simulation workflows, emphasizing separation of concerns between modeling and simulation

Roy Parvar Zanjan Company – Accounting Intern (Part-time) Sep 2022 – Apr 2023

- Assisted with bookkeeping by recording financial transactions, preparing invoices, and reconciling accounts
- Supported month-end closing and the preparation of financial reports, maintaining accurate records of expenses, payments, and receipts
- Coordinated meetings and supported communication with clients and stakeholders to keep financial operations running smoothly

PROJECTS

BookBuddy | Full-Stack Reading Tracker *Java*, *Spring Boot*, *React*, *TypeScript*, *SQL Server*, *Docker*

- Built a full-stack reading management platform with a layered backend following Controller-Service-Repository and MVC design principles
- Developed RESTful APIs for user authentication, book management, reading progress, reviews, and monthly analytics
- Designed and normalized a relational database with JPA/Hibernate entity relationships
- Integrated Swagger and Postman for API documentation and testing; collaborated using Git in an Agile sprint-based workflow

Nest | Personal Finance & Expense-Splitting Platform *React*, *Spring Boot*, *Java*, *SQL*, *REST APIs*

- Developing a full-stack personal finance application with expense tracking, budgeting, savings goals, account management, and financial reporting
- Designing a scalable backend with secure user authentication and normalized database schemas
- Building interactive dashboards to visualize spending habits and monthly financial trends

MyPlanner | Productivity & Task Management App *TypeScript*, *JavaScript*, *HTML/CSS*

- Developed a responsive productivity app with task creation, editing, filtering, sorting, and priority management
- Used the Local Storage API to persist user data across sessions; built reusable UI components and responsive layouts
- Applied DOM manipulation and event-driven programming to improve user experience

VOLUNTEERING

- SCLD Volunteer, York University (May 2025 – Sep 2025)
- Event Volunteer, Capstone Day 2025 and Discovery Day 2024, York University
